Richard

I am attaching class schedules for the intro and advanced classes. I would love for the students to have some exposure to EPA personnel, and for that matter USDA and or FDA. Unfortunately, I do not have contacts within any of the agencies related to crop protection or biotech regulatory science in agriculture.

There are two ways that I see you could participate:

1. If you look at the schedule for the intro class, I could move day 14 (November 27) to create a class period for agency involvement. You could look at the schedule and decide what the EPA or the combined agencies could cover that would add to the class. That would give you 2 hours and 45 minutes to cover things that are unique from the agency's point of view.

and/or

2: Look at the schedule and see if there are topics someone from your agency would like to work with the existing lecturer to help present the information. I am sure they would appreciate working with someone from the EPA or USDA.

Look forward to hearing from you!

Thanks

Keith

Keith—

First off, I need to offer my apologies. I've been meaning to call you for quite some time. Every week I say that I'm going to reach out to you regarding the Regulatory Science Class and then competing priorities interfere with that goal.

I just wanted to reach out to offer any support that the Office of Pesticide Programs may be able to provide to assist with this class. I suspect that the course for this semester has already started, but if you see an opportunity for EPA involvement, I would be willing to discuss those possibilities with you.

Perhaps we should find some time to chat in the coming weeks?
